# F.J. FEDDERSEN™ RIFLING

## Precision from within

### Primed for Performance

When you want dramatically increased shooting accuracy, you want a Feddersen barrel. Our single-edge polygonal rifling (SEPR) process is dual-patented gun barrel technology which applies a single edge area and a polygonal area separating the grooves. This produces a hybrid standard and polygonal rifling, reducing deformation of the bullet with minimal engraving. Bullets achieve a more symmetrical trajectory through the barrel, existed in the straightest line towards the target possible.

**Traditional**

**Polygonal**

**SEPR**

Our SEPR process ensures a tighter seal of the projectile, significantly reducing forward escaping gases and minimizing loss of gas pressures. Ultimately, this design has the capabilities of shooting match grade ammunition at sub Minute of Angle (MOA) accuracy and honing processes, as well as our diverse offering of compatible products ensure Feddersen pistol barrels are primed to give the best performance for a lifetime.

# NOTHING FIRES AS WELL AS **F.J. FEDDERSEN**

## **Results Speak for Themselves**

Feddersen is proud of the accuracy results achieved with our specialty barrels. You don't need to take our word for it. In a 2017 comparison test of after-market barrels performed by on-line magazine Major Pandemic, our barrels out performed others.

**“Feddersen barrels ...  
shine at the 15-yard line  
with mid-grade practice  
ammo.”**

**- Major Pandemic, 11/17**

## **We Garnette Our Barrels**

There is no risk to improving your accuracy. Our guarantee lets you invest in your shooting experience with the peace-of-mind that only comes when you are working with a proven leader in specialty gun-making. Try our barrels and love your results or send it back.

## FJ. FEDDERSEN™ CROWNING

A crown is a detailed, rounded depression in the barrel muzzle. Crowning, combined with our SERP rifling, greatly improves accuracy, ensuring the muzzle is free from any imperfections and allowing exciting gas pressure to be delivered uniformly across the muzzle face.

## Have YOUR FEDDERSEN YOUR WAY

Feddersen GL 17 & 19 barrels are available with a threaded muzzle or with our crowning. Threaded muzzels are ready to accomodate the addition of flash, suppressor or condensor, Included thread protectors let you keep your options open and your barrel pristen.

## Crowned OR Threaded
